Patient Name	Cahill Phantom	Modality	XRAY
Patient ID	1568	Institution	Community Animal Hospital
Accession No.	5759943-000292	Referring Veterinarian	Kathleen Mendez-Valle DVM
Age	9 years 11 months	Image Count	2
Sex	M	Responsible Person	Cahill Catherine Cahill
Species	Canine		
Breed	Dachshund		
Spayed/Neutered	YES		

STUDY TYPE(S)

Extremities - Metacarpus

HISTORY / REASON FOR STUDY

O noticed p limping this morning. During exam elicited pain on palpation of RF paw digit #5. R/O fracture vs sprain vs soft tissue injury vs neoplasia

OBSERVATIONS :

Study: Right thoracic limb, two images

Radiographic findings:

- 1. Regional circumferential soft tissue swelling spans the right fifth digit
- 2. A long oblique closed complete discontinuity is seen at the distal third of the right fifth metacarpal, traversing the level of the distal metaphysis.
- 3. No other abnormalities are identified.

CONCLUSIONS:

- 1. Closed complete minimally displaced traumatic fracture of the right fifth metacarpal with associated regional edema and/or hemorrhage.
